

Amendments to the Specification (continued):

Abstract

Please replace the abstract with the following amended abstract:

Embodiments of methods, systems, devices and/or circuits for a power converter are described in which the power converter includes a charge pump capacitor coupled to a two transistor totem-pole configuration in the power converter so as to drive a primary of an isolation transformer, and wherein a parasitic diode in one transistor opposes a parasitic diode in the other transistor.

The above amended abstract in clean text (no markings) follows:

Embodiments of methods, systems, devices and/or circuits for a power converter are described in which the power converter includes a charge pump capacitor coupled to a two transistor totem-pole configuration in the power converter so as to drive a primary of an isolation transformer, and wherein a parasitic diode in one transistor opposes a parasitic diode in the other transistor.
